Proposition 4 12

Proposition 218 13, 14

1 COMES NOW, Real Parties in Interest CITIES OF CARLSBAD, CHULA VISTA,
 2 CORONADO, DEL MAR, EL CAJON, IMPERIAL BEACH, POWAY, SOLANA BEACH, and
 3 THE COUNTY OF SAN DIEGO (collectively "Responding Copermittees"), who file this joint
 4 brief in response to Petitioners' Opening Brief as follows:

I.

INTRODUCTION

7 This brief was prepared at the request of the San Diego County City Attorneys
 8 Association, to be filed on behalf of those Real Parties in Interest that chose to participate.
 9 Responding Copermittees participated in preparing this brief. Other cities may join this brief
 10 on any or all issues if they so choose.

A. Local Implementation of the Municipal Stormwater Permit

12 NPDES Permit No. CAS0108758, issued by the California Regional Water Quality
 13 Control Board San Diego Regional ("Regional Board") on February 21, 2001,¹ applies to
 14 discharges of urban runoff from the storm sewer systems draining the watersheds of the
 15 County of San Diego, the 18 incorporated cities within the county, and the San Diego Unified
 16 Port District. Each of these jurisdictions collects and channels storm water and non-
 17 stormwater flows that enter their collection systems. By law, these jurisdictions are the
 18 regulated "dischargers" of these flows, regardless of the actual sources of the water or of the
 19 pollutants these discharges may contain. Therefore, by law, these jurisdictions must have a
 20 federally recognized and federally enforceable National Pollutant Discharge Elimination
 21 System (NPDES) permit for those discharges. Pursuant to a federal delegation and state law,
 22 the permit issued by the Regional Board, and subsequently modified by the State Water
 23 Resources Control Board (State Board) is that permit.

24 Responding Copermittees are committed to improving water quality and to protecting
 25 water-dependent environmental resources in San Diego County. We recognize that polluted

27 ¹ Unmodified references to the "permit" herein are to this permit.
 28

1 water is a threat to health and safety, a drag on economic prosperity, and a cause of
2 environmental degradation, whether the pollution affects inland creeks and streams, coastal
3 lagoons, or beaches. We recognize that local governments can contribute to improved water
4 quality with better land use planning, focused local regulatory programs, and by setting a good
5 example for the private sector. We acknowledge that the permit is a key tool for improving
6 water quality in San Diego. Without exception, we are working diligently to implement that
7 permit and to achieve cleaner water.

8 This brief does not argue that any terms of the permit are invalid, though we have
9 concerns about the permit and have expressed them in the past. Instead, this brief is confined
10 to identifying and addressing some key implementation issues that will arise if this Court
11 vacates, modifies or remands all or part of the permit. As dischargers, Copermittees, and local
12 governments, we must cope the results of this litigation. We will implement this permit, or any
13 successor permit that may issue after this litigation is concluded. But between now and then,
14 some transitional issues must be addressed.

15 **B. Background, and Issues Not Addressed in this Brief**

16 As the record before this Court shows, the terms of this permit have been the subject of
17 contentious debate. The Regional Board staff draft of this permit released for comment in
18 October 2000 led to the submission of hundreds of pages of comments. The staff draft
19 permit was significantly amended in response to these comments before a final permit was
20 promulgated. However, some concerns raised by the County and various cities were rejected.
21 This left Copermittees who were concerned about the terms of the final permit with a choice.
22 They could appeal the permit to the State Board and the courts, devote staff time and
23 resources to litigation, and risk enforcement action. Or, they could focus their resources on
24 implementing local programs as mandated by the permit.

25 The 18 Copermittees named as Real Parties in this litigation chose the second option.
26 They did not appeal the permit to the State Board, or to this Court. The principle focus of
27 Responding Copermittees, as was true in 2001, continues to be on implementing programs in
28

1 a manner that will improve water quality and protect water-dependent resources.² For
2 purposes of this litigation, we leave issues of permit validity under current federal and state
3 law to Petitioners, Respondents, and the Court.³

4 **C. Issues Addressed in this Brief**

5 Petitioners have asked this Court to issue a writ that would, among other things,
6 rescind the permit. The issuance of a writ either fully or partially invalidating the permit
7 would raise issues affecting local government storm water discharges and storm water
8 programs in San Diego County. Local jurisdictions cannot shut off the rain or plug their storm
9 drains, but they cannot legally discharge storm water without an NPDES discharge permit.
10 Therefore, Responding Copermittees ask, if the permit is rescinded or remanded in whole or in
11 part, that the Court both provide a legal basis for continued stormwater discharges, and identify
12 the terms applicable to those discharges during any transition period.

13 Responding Copermittees also request that the Court provide guidance on two other
14 issues affecting potential permit revisions and permit implementation. First, if Petitioners'
15 CEQA claims are upheld, we request direction from the Court on how responsibility for CEQA
16 analysis should be allocated. We argue below that the lead agency for any required CEQA
17 analysis should be the Regional Board, not the Copermittees.

18 Second, we request guidance from the Court on which sets of permit requirements are
19 federally mandated, versus state-mandated. The Court will face this issue in the context of
20 Petitioners claim that permit requirements that are not federally mandated are subject to
21 CEQA. However, if it resolves that legal question with the answer urged by Petitioners, the
22 Court might consider remanding the task of sorting out specific federal versus state mandate

23
24

25 ² In the future, some Copermittees will likely seek a sounder state legislative basis for
26 state and local governmental cooperation to pursue these goals.

27 ³ Responding Copermittees acknowledge that this Court has ruled that Real Parties may
28 not oppose the permit on Water Code grounds, because they did not exhaust their
administrative remedies.

1 distinctions to the Regional Board. We urge the Court to instead address this issue itself, at
2 least for the four key areas identified in Section V of this brief.

3 This issue has implications that go beyond CEQA. The Court's rulings on mandate
4 questions could affect the terms of any new permit. If the Court determines that some of these
5 requirements are solely state mandates, an issue would arise as to whether the state was obliged
6 to reimburse local governments for implementation costs. That issue could affect whether
7 those requirements were again mandated in a revised permit. If the state-law-based
8 requirements were retained in a revised permit, some Copermittees might also decide to pursue
9 claims for reimbursement as provided by state law.

10 II.

11 **THE COURT SHOULD PROVIDE THE PARTIES WITH**
12 **CLEAR GUIDANCE CONCERNING THE PERMIT TERMS**
13 **THAT ARE APPLICABLE DURING ANY TRANSITION**
14 **PERIOD.**

15 The Copermittees must discharge stormwater, and must have a permit to do so legally.
16 Therefore, if the current Permit is rescinded or remanded in whole in part, the Court should
17 provide for continued stormwater discharges, and should identify the terms applicable to those
18 discharges during any transition period.

19 This could be done by identifying specific requirements in the current permit that have
20 been set aside, leaving the rest of the permit in place. This would be workable. Alternatively,
21 the Court could determine that the current permit may not stand at all, e.g., until the Regional
22 Board completes the CEQA process. Rescinding the current permit would be workable only if
23 the Court further provided for an alternative permit, e.g., by ruling that the prior Municipal
24 Stormwater Permit for San Diego had been returned to force. The existence of some permit is
25 critical: Without an NPDES permit allowing discharges of urban runoff, the Real Parties in
26 Interest cannot legally operate their storm sewer systems. The specific terms of that permit are
27 also important, as the Copermittees would need to know how they could adjust their
28 stormwater programs pending further Regional Board or State Board action.

III.

ASSUMING RESPONDENTS' EXEMPTION FROM CEQA IS NOT APPLICABLE, RESPONDENTS MUST TAKE ON ALL DUTIES OF A LEAD AGENCY.

The Regional Board asserted in issuing the permit that compliance with the California Environmental Quality Act ("CEQA") was not required, because issuance of this permit was exempt from CEQA under Water Code § 13389 (Permit Finding 40). Petitioners assert that this exemption extends only to those NPDES permit requirements that are federally mandated, and not to permit requirements based on state law that go beyond federal mandates. (Petitioners' Opening Brief 21:12-24:9). If Petitioners are correct as to the law, then on the facts of this case CEQA compliance was required for a substantial part of this permit.⁴ But the Regional Board made no attempt to comply with CEQA. It instead relied entirely on this contested exemption.

The eight cities filing this brief have previously filed Statements of Issues arising under CEQA, and assert that CEQA applies to portions of this permit that are not federally mandated. The County has not filed a Statement of Issues, and takes no position in this litigation as to whether or not the issuance of this permit was exempt from CEQA. Responding Copermittees jointly request that the Court identify the Regional Board as Lead Agency under CEQA, if the Court determines that CEQA is applicable to all of or portions of the permit.

If CEQA is applicable to this permit, complying with CEQA will not be a simple task. The permit applies countywide, and affects new land development, redevelopment, industrial activities, commercial facilities, municipal facilities, and residential areas. It affects surface water discharges, water flow rates and velocities, discharges to ground water, and

⁴ Petitioners claim that Respondents concede that at least 40 percent of the requirements in the permit are not required by federal law. (Brief at 21:13-15, citing REBAR 669, SEAR 437.)

1 development project design. The Regional Board did not provide a CEQA-quality analysis of
2 these issues for either the proposed or the final permit.⁵ There was no analysis of how
3 restrictions on fire fighter training could affect public safety, or of how prohibiting
4 stormwater and non-stormwater discharges would affect water-dependent environmental
5 resources. There was no analysis of potential impacts on ground water contamination or
6 ground water levels in shallow groundwater basins from increased stormwater infiltration.
7 There was no analysis of the potential impacts on open space resources of placing new
8 burdens on in-fill redevelopment projects. There was no analysis of how development
9 patterns could be affected by the need to find space for stormwater collection and treatment
10 facilities. There was no analysis of alternatives to the permit mandate to intercept and treat
11 runoff from new land development projects "close to pollution sources, where feasible."

12 In short, if CEQA were applied to the permit requirements the Regional Board
13 imposed based on state law, more analysis of the potential environmental impacts of the
14 permit, and of alternatives to key permit requirements, would likely be needed. Therefore,
15 any remand to the Respondents' respective Boards requiring CEQA compliance may have a
16 significant fiscal impact on the CEQA Lead Agency.

17 Although there are multiple public agencies involved in implementing the programs
18 that are needed to comply with this permit, the CEQA guidelines are clear that the Lead
19 Agency responsibility should fall upon the Respondent Regional Board.

20 Under CEQA guideline § 15051, if two or more public agencies are involved in a
21 project, the following criteria governs Lead Agency determination as follows:

- 22 (a) If the project will be carried out by a public agency, that
23 agency shall be the Lead Agency even if the project would be
24 located within the jurisdiction of another agency.

25
26
27 ⁵ The Copermitees have addressed CEQA in implementing specific programs required
28 by the permit in each municipal jurisdiction. However, the discretionary decisions remaining
at the local implementation stage of this process are greatly diminished.

1 (b) If the project is to be carried out by a nongovernmental
 2 person or entity, the Lead Agency shall be the public agency
 3 with the greatest responsibility for supervising or approving
 4 the project as a whole.

5 (1) The Lead Agency will normally be the agency with
 6 general governmental powers, such as a city or
 7 county, rather than an agency with a single or limited
 8 purpose such as an air pollution control district or a
 9 district which will provide a public service or public
 10 utility to the project.

11 (2) Where a city rezones an area, the city will be the
 12 appropriate Lead Agency for any subsequent
 13 annexation of the area and should prepare the
 14 appropriate environmental document at the time of
 15 the rezoning. The Local Agency Formation
 16 Commission shall act as a Responsible Agency.

17 (c) Where more than one public agency equally meet the criteria
 18 in subsection (b), the agency which will act first on the
 19 project in question shall be the Lead Agency.

20 (d) Where the provision of subsections (a), (b), and (c) leave two
 21 or more public agencies with a substantial claim to the Lead
 22 Agency, the public agencies may by agreement designate an
 23 agency as the Lead Agency. An agreement may also provide
 24 for cooperative efforts by two or more agencies by contract,
 25 joint exercise of powers, or similar devices. (14 Cal. Code
 26 Regs. § 15051.)

27 Under subsection (a), the guideline places Lead Agency responsibility upon the public
 28 agency that carries out the project even if the project is located in the jurisdiction of another
 public agency. In this instance, the project will be carried out in numerous jurisdictions.
 However, the Regional Water Quality Control Board issued the Permit. As the issuing
 agency, it has the primary responsibility of carrying out the project as defined in CEQA. (See
 also, Public Resources Code § 21165; Friends of Cuyamaca Valley v. Lake Cuyamaca
Recreation & Park Dist. (1994) 28 Cal.App.4th 419, 426.)

As Lead Agency, Respondent Regional Water Quality Control Board would be
 responsible for most decisions regarding the proper manner of complying with CEQA when it
 considers any reissuance of the Permit. (Public Resources Code § 21067; 14 Cal. Code Regs.

1 § 15050.) Unless upon remand the Regional Board decides to proceed directly with an
2 Environmental Impact Report (EIR), the Lead Agency's responsibility would be to conduct an
3 initial study to determine whether the project may have a significant effect on the
4 environment and whether to prepare an EIR, a Negative Declaration, or a Mitigated Negative
5 Declaration for the project. (Public Resources Code §§ 21080(c), 21080.1; 14 Cal. Code Regs.
6 § 15063.) Before making a determination of significant impact, the Lead Agency must
7 consult with Responsible Agencies. (Public Resources Code § 21080.3.) This requirement
8 would include consultation with the Copermittees, who would be Responsible Agencies under
9 CEQA for this project.

10 As the agency responsible for issuing the Permit, the Regional Board would be in the
11 best position to monitor any mitigation programs required under CEQA. (Public Resources
12 Code § 21081.6.) The Responsible Agency that identifies potential significant impacts of the
13 Permit would provide performance objectives and guidelines for mitigation of the identified
14 impacts. (Public Resources Code § 21081.6(c).)

15 These mitigation measures and the monitoring programs established thereunder
16 would then be subject to final approval by the Regional Board as Lead Agency. This approach
17 is the most sensible for considering all environmental impacts of the whole project. As the
18 Lead Agency, the Regional Board properly fills that role in that it has the broadest
19 governmental powers over the project and therefore should be most responsible for the
20 consideration of all environmental impacts of the Permit.

21 By contrast, the Responsible Agencies (Copermittees) should only be delegated with
22 considering aspects of the project that are subject to their discretion and jurisdiction. This is
23 of particular importance in the area of regional impacts within watersheds, which lie in
24 several jurisdictions. To place responsibilities directly on the Copermittees would result in a
25 piecemeal approach to otherwise regional environmental impacts. CEQA requires the
26 Responsible Agency to respond to requests for information from the Lead Agency. (14 Cal.
27 Code Regs. § 15096.) This consultation process requires, both as a matter of practicality and
28 as a matter of law, that the Regional Board take on the responsibility of determination of all

1 environmental impacts arising out of the Permit that it issues and coordinating local
2 environmental issues into a single document. Once that determination is made, the
3 Responsible Agencies are bound by the Lead Agency's decision on whether to prepare an EIR,
4 a Mitigated Negative Declaration, or Negative Declaration. (Public Resources Code
5 § 21080.1; 14 Cal. Code Regs. § 15050(c); City of Redding v. Shasta County LAFCO (1989)
6 209 Cal.App.3d 1169.)

7 In conclusion, if the CEQA exemption used by Respondents is not applicable or does
8 not apply to all of the requirements in this permit, this matter should be remanded to the
9 State and Regional Board to follow the requirements of the California Environmental Quality
10 Act. In doing so, it is requested that this Court designate the Regional Board as the Lead
11 Agency with all responsibilities for implementing CEQA. As Responsible Agencies, the Real
12 Parties in Interest will cooperate with the Regional Board in determining what
13 environmental impacts are significant and require appropriate study under CEQA. Also, as
14 part of this process, the Responsible Agencies will make recommendations on mitigation
15 monitoring programs for areas within their jurisdiction. As Lead Agency, any remand must
16 include language that requires the Regional Board to consult with the Responsible Agencies
17 regarding the existence of environmental impacts and how to deal with those impacts.
18 Finally, the Regional Board must be directed to take steps to fund the environmental work it
19 is required to do under CEQA. Public Resources Code § 21106 requires the State to budget
20 funds related to protection of the environment. This section states as follows:

21 All state agencies, boards, and commissions shall request in their
22 budgets the funds necessary to protect the environment in relation
23 to problems caused by their activities. (Public Resources Code
24 § 21106.)

24 The finding of this Court that environmental impacts must be assessed should place
25 the fiscal responsibility where it belongs for a regional program issued by a State Board. This
26 section places a mandatory duty on the Regional Board to seek necessary funding related to
27 environmental impacts caused by issuance of the Permit. The issue of this environmental
28 protection requirement should include financial obligations necessary in the preparation of

1 environmental documentation required by the Public Resources Code. A regional
2 Environmental Impact Report or other environmental documentation issued by the State
3 Board would necessarily fall under this section. Therefore, any remand should include a
4 requirement that the Respondents fulfill their obligations under Public Resources Code
5 § 21106.

6 IV.

7 **THE DESIGNATION OF STATE MANDATED**
8 **OBLIGATIONS UNDER THE PERMIT BY THIS COURT**
9 **WOULD CLARIFY ENVIRONMENTAL AND FINANCIAL**
10 **ROLES OF THE REAL PARTIES IN INTEREST AND**
11 **RESPONDENTS.**

12 A. The issuance of a Writ on CEQA grounds would have significant
13 financial implications to local governments subject to the Permit.

14 As discussed above, the Petitioners have challenged the CEQA exemption in Water
15 Code § 13389. According to Petitioners this issue hinges on whether or not this Court finds
16 that conditions in the Permit are based on State regulatory authority rather than federal
17 authority under the Clean Water Act. This issue has greater significance to the citizens of
18 San Diego County than solely whether an environmental document need be prepared. In
19 addition to the cost of environmental compliance, this issue may determine which level of
20 government is required to pay for new regional programs established by the Permit.⁶ That
21 determination could in turn affect whether some requirements are retained in a revised
22 permit—the state may choose not to exceed federal mandates in some area, if there is a risk
23 the state would be required to reimburse local government costs to implement those extra
24 requirements.

25 ⁶ As discussed below, the process for sorting out who must pay these costs is claims-
26 driven and litigious. Some Copermitees may chose not to assert claims for state
27 reimbursement, even if the ruling of this Court provides some support for such claims. The
28 County, for example, believes it may be more productive to seek state legislation to ensure that
money is well spent, than to seek a ruling requiring the state to reimburse local governments
for programs that are not cost effective.

1 As an example, the City of Carlsbad has budgeted \$1,873,190 for its fiscal year 2001-
2 2002 storm water protection program in order to comply with the Permit.⁷ The cost of
3 implementing this Permit will be significant to all of the Real Parties in Interest.

4 Whenever the Legislature or any state agency mandates a new program or higher level
5 of service on any local government, the State must provide a sufficient amount of funds to
6 reimburse local government for the cost of the program or the increased level of service.
7 (Const. Art. XIII B, § 6.) This requirement was enacted as part of Proposition 4 in 1979 and
8 became effective on July 1, 1980 (see, i.e., Los Angeles Unified School District v. State of
9 California (1991) 229 Cal.App.3d 552) (regarding reimbursability of costs incurred to comply
10 with certain Cal OSHA regulations)).

11 The purpose of this State initiative was to preclude the State from shifting financial
12 responsibility for carrying out governmental functions on to local entities that are ill
13 equipped to handle the task. (County of Fresno v. State of California (1991) 53 Cal.3d 482,
14 487.) The Legislature has implemented this constitutional mandate with certain exceptions.
15 One of those exceptions is for a statute or executive order that implements federal law, unless
16 the statute or order mandates costs that exceed the mandate in federal law. (Government
17 Code § 17556.) The exception for federal programs applies not only to direct federal
18 mandates but also to programs that are technically voluntary but coercive in nature, which
19 the State passes on to local governments. (City of Sacramento v. State of California (1990) 50
20 Cal.3d 51 (unemployment insurance).)

21 The Permit subject to this action was issued by a State administrative agency, the
22 Regional Board (Water Code § 13200 et seq.). It is part of the Executive Branch of State
23 government with its membership appointed by the Governor (Water Code § 13201(a)). Its
24

25 ⁷ Responding Copermittees request that the Court take judicial notice of the official
26 budget document of the City of Carlsbad. Page B-23 of the "City of Carlsbad 2001-02
27 Operating Budget and Capital Improvement program" is attached hereto as Exhibit "A". As
28 the adopted Budget of the City of Carlsbad, it is a legislative enactment of a public entity in the
United States (Evidence Code § 452(b)).

1 executive orders are the type of regulation subject to potential reimbursement under the
2 State Mandates program (see, Carmel Valley Fire Protective District v. State of California
3 (1987) 190 Cal.App.3d 521).

4 The issuance of the Permit by the Regional Board was founded upon a CEQA
5 exemption that claimed the entire Permit was federally mandated. (Permit Finding 40.) The
6 ability of the Copermittees to seek cost reimbursement will be directly affected by the Court's
7 determination on the CEQA issue. Whether the Copermittees actually receive
8 reimbursement will be subject to the jurisdiction of the Commission on State Mandates and
9 not this Court. (Cal. Const. Art. XIII B, § 6; Government Code § 17500 et seq.)

10 If some local governments file claims, the Commission on State Mandates will be
11 required to determine the applicability of an exception to this reimbursement obligation for
12 expenses that can be recovered from sources other than taxes. (County of Fresno, supra, 53
13 Cal.3d 482.) In other words, if a fee can be charged by the local legislative body to pay for the
14 costs, a State reimbursement obligation does not exist. Here, the cost of a storm water
15 permit program may not be funded exclusively through fees. In the only case on the subject
16 to date, it has been held that, absent voter approval, a city cannot establish a general fee
17 program to pay for costs to produce or eliminate pollutants contained in storm water.
18 (Howard Jarvis Taxpayers Association v. City of Salinas (2002) 98 Cal.App.4th 1351.)

19 In the Salinas case, the court reviewed a storm water management utility fee adopted
20 by the Salinas City Council to implement the requirements of the Federal Clean Water Act.
21 (33 U.S.C. § 1251, et seq.; 40 C.F.R. § 122.269(a), et seq.) The court held that this fee was a
22 property-related fee that violated Article XIII B, § 6, subdivision C, of the California
23 Constitution because it had not been approved by a majority vote of the affected property
24 owner or a two-thirds vote of the residents of the electors. In applying Proposition 218, the
25 "Right to Vote On Taxes Act", the court found that the exception for the voter approval
26 requirements for "sewer" and "water" service did not apply to storm water clean up
27 programs. Therefore, the City of Salinas was required to seek a vote of the people prior to
28

1 implementing its fee program intended to pay for meeting the federal clean water
2 requirements.

3 The Salinas case demonstrates that storm water fees imposed by local government
4 could be considered subject to voter approval requirements. The language of the state
5 mandate exception requires that the local government have "the authority to levy service
6 charges, fees, or assessments sufficient to pay for the mandated program or increased level of
7 service." (Government Code § 17556(d).) Proposition 218 has, based on the Salinas ruling,
8 eliminated the ability of local government to pay for the total costs of the Permit program by
9 imposing fees.

10 In these circumstances, it is important that the Court delineate, with as much
11 specificity as possible, which portions of the Permit are State-mandated requirements and
12 which are federally mandated. Obviously, this is important in the context of CEQA under the
13 Petitioners' State Water Code claims. It is also important in terms of the fiscal aspects of the
14 Permit program. The parties can use the Court's order as a guide to determine what cost
15 sharing arrangements should be developed to implement the Permit. The Court's delineation
16 of CEQA issues can prevent future litigation that might arise from the possible issuance of a
17 writ.

18 **B. Issuance of a Writ on regulatory grounds would have significant**
19 **impacts on application of the permit to local government.**

20 In order to fashion an appropriate remedy for the environmental claims, the Court
21 would have to delineate those issues that may require environmental assessment and those
22 which do not. There are several issues that fall into this category. Each of these issues has
23 been raised by the Petitioners and is potentially subject to the issuance of a writ by this Court.
24 The delineation of those State-mandated issues by the Court will also assist the parties in cost
25 allocation for the Permit program.

26 Petitioners discuss the issue of federal versus state mandates in detail in their Opening
27 Brief, at 11:11-19:3. They assert that federal law requires that municipal stormwater
28 discharges be regulated based on a Maximum Extent Practicable standard. They assert both

1 that any more stringent requirements are based solely on state law and require CEQA review,
2 and that states may not impose more stringent requirements on municipal stormwater
3 discharges and programs, even if the state reimburses local government costs.

4 Petitioners base their position on the clear differences in federal law between the
5 special narrative requirements set out for municipal stormwater discharges at 33 U.S.C.
6 § 1342(p)(3)(B), and the baseline statutory requirements applied to industrial (including
7 construction and perhaps commercial) stormwater discharges by reference at 33 U.S.C.
8 § 1342(p)(3)(A)). Petitioners also reconcile their interpretation of these statutory provisions
9 with relevant case law, including recent Ninth Circuit rulings.

10 If Petitioners are correct, then municipal governments cannot be required to
11 implement any programs, or to impose any requirements on third parties, that are not
12 "practicable." In addition, municipalities could not be penalized based solely on receiving
13 water quality impacts if municipal stormwater discharges contributed to water quality
14 problems.

15 Petitioners identify a large number of permit requirements that appear to them to go
16 beyond what is mandated by federal law. Four sets of requirements that may exceed federal
17 mandates or that may be inconsistent with federal or state law are discussed briefly below.
18 These are the sets of requirements that Responding Copermittees anticipate it would be most
19 difficult for the Copermittees and the State and Regional Boards to work out on remand,
20 absent specific guidance from this Court.

21 **1. Land Use Authority—General Plan provisions**

22 Federal regulations state that municipal programs put in place to meet NPDES
23 permit requirements for municipal stormwater discharges should include "planning
24 procedures including a master plan to develop, implement and enforce controls to reduce the
25 discharge of pollutants from municipal separate storm sewers which receive discharges from
26 areas of new development and significant redevelopment." (40 C.F.R. section
27 122.26(d)(2)(iv)(A)(2).)

1 Based on these federal regulations, it is inevitable and appropriate that the permit
2 would include some provisions related to land use planning and local "master plans."
3 However, Petitioners' claim that the Permit goes too far, based in part on state law, and that
4 the Regional Board has exceeded its authority by unlawfully intruding into local land use
5 authority.

6 The California Constitution gives counties and cities the powers to "make and enforce
7 within (their) limits all local police, sanitary and other ordinances and regulations not in
8 conflict with general laws." (Cal. Const. Art. XI, § 7; Petitioners' Opening Brief 24: 10-26:2.)
9 State general law, at Government Code § 65302, defines what must be in a local General
10 Plan: the seven mandatory elements of a General Plan are elements addressing land use,
11 circulation, housing, conservation, open space, noise and safety.

12 The Permit requires that each city and the County amend its General Plan. The
13 relevant provision states as follows:

14 Each Copermittee's General Plan ... shall include water quality and
15 watershed protection principles and policies to direct land-use
16 decisions and require implementation of consistent water quality
protection measures for development projects. (Permit § F.1.a.)

17 This requirement could be interpreted to require the addition of new elements to the
18 General Plan, over and above those specified in the Government Code. Some state agencies
19 have been given power by the Legislature to ensure that local general plans meet certain
20 additional requirements. For example, the Legislature has delegated authority to the
21 California Coastal Commission to place coastal access requirements in local General Plans.
22 (Public Resources Code § 30500(a).) The Coastal Act requires submission and approval of
23 land use plans, including the Land Use Element of each local jurisdiction's General Plan.
24 (Public Resources Code § 30180.6.) There are no similar provisions in the Water Code
25 granting the State Board or Regional Board jurisdiction over the General Plans of the Real
26 Parties.

1 This situation places two issues before the Court. First, do the specific general plan
2 provisions of the permit exceed the federal mandate that municipalities discharging
3 stormwater under an NPDES permit have appropriate "planning procedures including a
4 general plan" in place? If so, the CEQA and state mandate issues discussed previously come
5 into play again.

6 A second question is whether the Regional Board has authority under the state
7 constitutional and statutory provisions cited above to require that local General Plans be
8 amended in a particular manner. If the Court concludes that the Regional Board may not
9 intrude on local land use authority to this degree, it could declare this provision
10 unconstitutional, mandating the Respondents to remove the General Plan requirements from
11 any subsequent Permit issued. Some other means would need to be found to ensure that local
12 stormwater programs met the baseline planning requirements set out in federal regulations.⁸

13 In all of these scenarios, a remand to the RWQCB should require that General Plan
14 issues be included in any CEQA environmental assessment the Court might order. A
15 clarification of the issue regarding the propriety of Board-imposed General Plan requirements
16 would assist the parties in their future dealings and prevent potential future litigation, in
17 addition to clarifying the scope of any required environmental documentation and future cost
18 recovery claims.

19 **2. Land Use Authority—Special "SUSMP" Requirements**

20 The permit requires Copermittees to imposes additional and distinct regulatory
21 requirements on a defined set of "priority" land development and redevelopment projects.
22 These additional requirements are implemented through a "Standard Urban Stormwater
23 Mitigation Plan" or "SUSMP" that the Copermittees have been required to prepare. The
24
25

26 ⁸ For example, a Regional Board finding that this federal requirement had been met,
27 could be substituted for a Regional Board mandate. Or, the legislature could amend the Public
28 Resources Code.

1 SUSMP is a template for implementation of these additional requirements through local
2 ordinances and/or through local permitting policies and programs.

3 Under the permit and the SUSMP, these priority projects must use "treatment control"
4 best management practices (BMPs) to treat storm water. All other projects and activities
5 addressed in the permit can instead use other combinations of control measures, e.g., they
6 can rely instead on effective and practicable measures to prevent the pollution of storm water.
7 The permit further requires that these mandatory treatment control BMPs be of a certain size
8 (with respect to volume or flow capacity) based on rainfall records. Finally, the requirement
9 for treatment control BMPs of a specified size is not tied to a "maximum extent practicable"
10 standard, but is mandatory unless the use of treatment control BMPs is "infeasible."

11 Petitioners have a significant interest in the land development process. They assert
12 that the application of an "infeasibility" standard to controls for land development projects is
13 both inconsistent with the "maximum extent practicable" standard of federal law, and in
14 excess of federal mandates. Petitioners have been willing to expend substantial resources to
15 put this issue before the Court. To reduce the potential for future litigation over a revised
16 permit, the Real Parties filing this brief request that the Court clearly resolve two questions
17 related to the SUSMP requirements of the permit: First, are these requirements prohibited
18 because they are inconsistent with the "maximum extent practicable" limitations that
19 Petitioners assert are imposed by federal law? Second, if the requirements are not prohibited,
20 are they in excess of federal mandates? As is the case for the other issues identified in this
21 section, the Court's resolution of these questions could affect whether SUSMP requirements
22 are retained in a revised permit, and if they are retained which level of government must fund
23 programs to impose and enforce those requirements.

24 ///
25 ///
26 ///
27 ///
28 ///

3. Water Quality-Based Permit Requirements

A second set of important requirements in the permit is requirements that are tied to water quality outcomes in receiving waters.⁹ The most obvious of these requirements are absolute and unqualified water-quality based discharge prohibitions in the permit. (Permit §§ A.2, C.1.) These requirements are an overlay to the detailed requirements in the permit that particular regulatory programs be implemented, and that particular types and sizes of control measures be put in place.

If Petitioners are correct, then municipal governments cannot be required to implement any programs, or to impose any requirements on third parties, that are not "practicable." In addition, municipalities could not be penalized based solely on receiving water quality impacts if municipal stormwater discharges contributed to water quality problems. If the Court agrees with Petitioners that requirements of this kind are prohibited, the Court should clearly identify which provisions of the permit must be rescinded.

If the Court determines that the water-quality based provisions of the permit are not prohibited, but are state mandates, the affected provisions should again be identified. As discussed in section III above these determinations could affect the scope of any CEQA review, whether the state is required to bear the cost of implementing these requirements, and whether these requirements would be retained in a revised permit. By addressing this question now, the Court would help with the transition to a revised permit and revised local programs. The Court could possibly prevent future litigation regarding a revised permit, or regarding allocation of the cost burden for some programs.

///

///

⁹ Potentially relevant water quality reference points include both the narrative and numerical water quality objectives set out in the Basin Plan for San Diego, the beneficial uses set out in that Basin Plan, and state statutory provisions that prohibit discharges that create conditions of "pollution" or "contamination." State law defines those terms with reference, in part, to water quality impacts. (Water Code § 13050.)

4. Soil Erosion Categorized as a "Pollutant"

Another significant area of CEQA cost burden is the soil erosion requirements of the permit. The Petitioners have challenged whether the Regional Board can regulate downstream erosion as a "pollutant" (Petitioners' Opening Brief 29:9-30:17). The downstream erosion issue may give rise to environmental impacts that may need to be assessed. In addition, each jurisdiction will have to take measures to deal with downstream erosion and expend revenues in doing so. For that reason, if the Court finds in favor of Petitioners on this issue, there should be specific findings as to whether these measures exceed federal law for CEQA and cost allocation purposes.

C. If a Writ is issued, there is a need for specific findings.

Overall, the issues raised by these responding Real Parties in Interest address concerns as to the aftermath of any ruling in favor of Petitioners. One of the main thrusts of Petitioners' writ is the legal foundation of individual requirements in the permit. If the Permit is founded on federal legal authority, certain exemptions, both environmental and fiscal apply. If it is based on State Water Code authority, the Regional Board has the duty to environmentally assess the impacts of its permit, and may be compelled to determine whether program elements can be paid for by the state as state-mandated programs. Petitioners' challenge raises many specific implementation issues that this Court should address. The cost allocation issues are important because of the consequences of a violation of water quality standards. If the Copermittees implement the program as established in the permit, they can still be subject to fines for water quality standard violations even if they implement every element of the Permit. The application or non-application of federal law to justify the requirements of the Permit is of critical importance to each Copermittee. The cost of meeting the water quality-based requirements of the permit, if based on state law, may be borne by the State. The extent to which the Regional Board can implement its order through either federal or state mandates affects every resident of the County of San Diego.

If this Court issues a writ invalidating the permit, the Copermittees will still need to have authority to operate their storm sewer systems. For that reason, the Responding Copermittees respectfully request that the Court clearly provide for the continued applicability of some NPDES permit to municipal stormwater discharges, and that the Court clearly identify the transitional permit terms that will be applicable to those discharges until a new permit is issued. This will allow storm sewers throughout San Diego County to continue to operate.

Responding Copermittees also request that the Court state that local stormwater programs can either be left intact, or can be modified to conform to interim permit terms, pending issuance of a new permit. Local stormwater programs are not based on powers delegated from the Regional Board in the current permit, but are instead based on local government police powers. Some Copermittees may choose to leave in place requirements they have already adopted. Others may choose to modify some program elements that can be modified based on the ruling of this Court. We request that the Court make it clear that each Copermittee has the discretion to make these decisions.

If CEQA is found to have been violated, Responding Copermittees request that this Court direct the Regional Board to act as the Lead Agency to assess those environmental impacts identified by the Court as needing analysis as part of the CEQA process. Further, the Responding Copermittees request findings identifying each issue requiring environmental assessment, to give the Regional Board appropriate direction on remand. The Copermittees would act as Responsible Agencies and cooperate with the Regional Board in the environmental process. However, as the State agency primarily responsible for the issuance of any revised permit, the cost of environmental documentation should be considered a State obligation. (Public Resources Code § 21106.)

Petitioners have challenged the water quality-based requirements of the permit as exceeding Respondents' authority under the Clean Water Act. If the Court rules that these

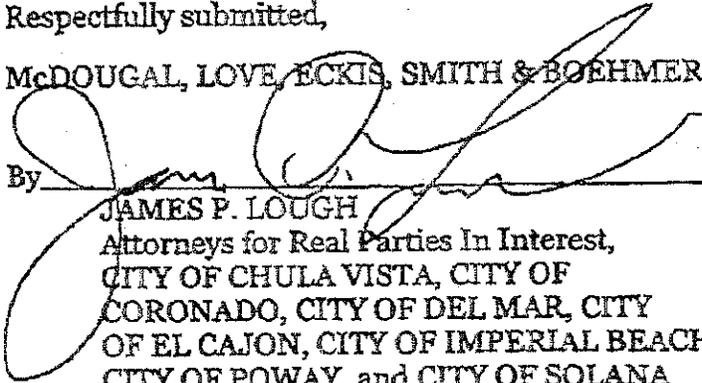

1 requirements cannot be applied to municipal users, we ask the Court to delete all
 2 inconsistent provisions of the permit beginning with water quality based discharge
 3 prohibitions, but also including program-linked water quality provisions and the provisions
 4 of the permit that would impose penalties for water quality violations.

5 Finally, we ask that this Court specify the permit conditions that still remain valid
 6 despite Petitioners' challenges. If portions of the Permit are declared invalid and others are
 7 not, specific findings would assist each city in determining how to shape their programs while
 8 the Court retains jurisdiction.
